System Overview

Purpose

The **HRT (Hormone Replacement Therapy) Portal** is a comprehensive healthcare platform designed to streamline interactions between patients and healthcare providers. It allows patients to manage health information, schedule appointments, track symptoms, order lab tests, and receive personalized care. Providers can manage patient data, review intake forms, oversee orders, and track patient progress in real time.

Scope

- **Target Users:** Patients, Healthcare Providers, Administrators
- **Geographic Focus:** International, supports multi-country operations via Stripe/PayPal
- **Primary Functions:**
 - User authentication and profile management
 - Medical intake form submission and management
 - Appointment scheduling
 - Symptom tracking and assessment
 - Lab test ordering and management
 - Diagnostic kit ordering and tracking
 - Product catalog and e-commerce functionality
 - Provider dashboard for patient management
 - Admin controls for catalog, patient, and account management

Key Differentiators

- Unified healthcare ecosystem (patients + providers)
- Multi-currency, international-ready
- Secure payment processing (Stripe/PayPal)
- HIPAA-compliant architecture
- Real-time appointment management
- Symptom tracking and lab test integration

Business Value

For Patients/Users

- **Health Empowerment:** Track symptoms, view lab results, manage appointments
- **Cost Efficiency:** Transparent pricing, telemedicine reduces travel/time costs
- **Safety & Security:** Encrypted data, HIPAA compliance, secure payments

For Healthcare Providers

- **Operational Efficiency:** Centralized patient management, automated intake review
- **Revenue Growth:** Catalog-based e-commerce, recurring billing
- **Patient Care Quality:** Real-time monitoring of patient symptoms and lab results

For Healthcare Organizations

- **Competitive Advantage:** Modern digital platform, brand building
- **Scalability:** Supports thousands of concurrent users, flexible catalog and service addition

User Personas & Use Cases

User Persona 1: Maria – Patient

- **Goal:** Manage hormone health, track symptoms, access care conveniently
- **Use Cases:** Intake form submission, symptom tracking, lab test orders, telehealth appointments, treatment monitoring

User Persona 2: Dr. James – Provider

- **Goal:** Expand practice, improve operational efficiency
- **Use Cases:** Patient management, appointment scheduling, lab results review, prescription and catalog management

User Persona 3: Sarah – Admin

- **Goal:** Streamline operations and manage portal activities
- **Use Cases:** Appointment support, patient support, reporting, content and catalog management

Functional Requirements

1. Authentication & Authorization

- Registration, login, forgot/change password
- Email verification and role assignment
- JWT token-based access and route protection

2. User Profile & Account Settings

- Dashboard overview, profile management, account settings
- Notification preferences, session management

3. Medical Intake Form

- Multi-step medical history form
- ID verification (document upload and validation)
- Form submission tracking and PDF export

4. Symptom Tracking

- Gender-specific symptom categories
- Severity/frequency tracking
- Historical trends and reports

5. Appointment Scheduling

- Browse providers, select slots, confirm appointments
- Calendar view, reminders, rescheduling, telehealth links

6. Lab Tests & Diagnostics

- Browse catalog, order tests, track results
- Downloadable reports, result sharing with providers

7. Diagnostic Kits

- Kit ordering, tracking, payment, delivery
- Cart and checkout integration, reorder functionality

8. Product Catalog & E-Commerce

- View, add, edit, delete products/catalogs
- Cart, checkout, payment, order confirmation
- Subscription plans (PayPal/Stripe)

9. Legal & Compliance

- Privacy policy, terms & conditions, consent tracking
- HIPAA, GDPR, PCI-DSS compliance

User Roles & Capabilities

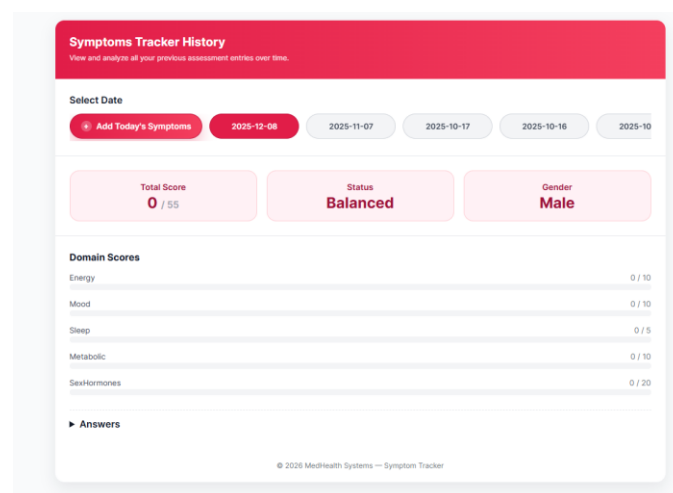

The HRT Portal supports multiple user roles, each with distinct capabilities to ensure secure access, role-based permissions, and workflow efficiency.

1. Patient

Purpose: Individuals using the platform to manage their health, track symptoms, book appointments, and receive treatment.

Capabilities:

- **Account Management:** Register, login, update personal info, manage security settings.
- **Medical Tracking:** Submit intake forms, track symptoms, update lifestyle info, view medical history.

3. Appointment & Meeting Management

Appointment Scheduling

- Manage provider availability, block slots, configure appointment types, handle recurring bookings

Patient Appointments

- View, reschedule, cancel, reminders, waitlist management

Telehealth Meetings

- Video consultations with chat, screen sharing, document upload, meeting notes

Scheduled Meetings					
First Name	Last Name	Email	Meeting Date	Meeting Time	Status
sam	kikla	skikla21@gmail.com	Friday, May 30	09:30 PM	Pending

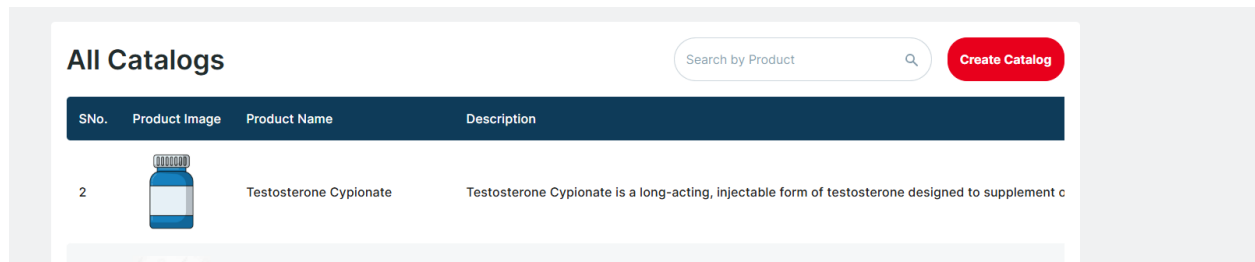

4. Product & Service Management

Catalog Management

- Create, edit, publish/unpublish catalogs
- Add detailed product info, set pricing, discounts, availability, inventory

Pricing & Promotions

- Tiered pricing, seasonal pricing, bundle offers, promotional campaigns with analytics

5. Revenue & Financial Management

Order Management

- Track all patient orders, process payments, refunds, cancellations

Subscription Management

- Manage recurring billing, track subscriptions, handle payment failures

Financial Reports

- Revenue analytics, trends, per patient, per product/service, payment tracking

6. Analytics & Reporting

Practice Metrics

- Patient, appointment, and revenue analytics with trends and segmentation

Custom Reports

- Generate, export, and schedule reports; email reports to stakeholders

7. Team & Staff Management

Admin Staff Management

- Create admin accounts, assign roles, monitor staff activity, generate compliance reports

Provider Features & Capabilities – Lab Results Module

1. Lab Results Dashboard

- **View All Results**
 - Providers can see a complete list of lab kits assigned to patients.
 - Display includes **Kit ID**, **Patient Name**, **Sample Received Date**, **Report Status**, **Report Date**, and **Actions**.
 - Status indicators (e.g., Ready, Pending) allow quick triage.
- **Search & Filter**
 - Search results by **Kit ID**.
 - Optionally filter by **Report Status** to view pending, ready, or in-progress results.
- **Pagination**
 - Navigate between pages of results using **previous/next** controls.
 - Provides scalability for providers managing multiple patient results.

2. Report Actions

- **View Reports**
 - Providers can open the full lab report for detailed patient results.
 - Supports review before communicating results to patients or updating treatment plans.
- **Download Reports**
 - Secure download functionality for offline access.
 - Reports can be shared with patients or stored in the provider's records.

3. Patient-Centric Features

- **Patient Identification**
 - Displays full patient name alongside kit information.
 - Supports linking multiple kit results to the same patient for longitudinal tracking.
- **Sample Tracking**
 - Displays **Sample Received Date** to track processing times.
 - Helps ensure timely review and follow-up on lab results.
 - Order kits

4. Status Monitoring

- **Report Status**
 - Indicates readiness of lab results.
 - Helps providers prioritize reviews and follow-ups.
- **Report Date**
 - Tracks when the lab results were finalized.
 - Supports auditing and regulatory compliance for medical record timelines.

5. Security & Compliance

- **Data Privacy**
 - Patient lab results are accessible only to authorized providers.
 - Ensures HIPAA-compliant access control and secure report handling.

- **Audit Trail**
 - All actions (viewing, downloading) are logged for provider accountability.

Technical Architecture

- **Frontend:** React 18, Redux Toolkit
- **Backend:** API-driven (REST/GraphQL), Node.js or similar
- **Database:** PostgreSQL/MySQL
- **Authentication:** JWT + role-based access control
- **Payment Integration:** Stripe, PayPal
- **Telehealth Integration:** Video call APIs

Data Flow & Integration

- Patient intake forms → Provider review → Lab order → Result delivery → Symptom tracking
- E-commerce module integrated with payment gateways
- API endpoints for all modules with secure authentication

Non-Functional Requirements

- **Security:** HIPAA, encrypted data, role-based access
- **Performance:** Page load <3s, concurrent users supported
- **Scalability:** Cloud-ready, microservices-compatible
- **Availability:** 99.5% uptime
- **Usability:** Responsive, accessibility-compliant (WCAG 2.1)

Success Metrics & KPIs

- User adoption rates
- Appointment scheduling efficiency
- Lab result turnaround time
- Symptom tracking engagement
- Revenue from product catalog
- Patient satisfaction score

Compliance & Legal

- HIPAA, GDPR, PCI-DSS compliance
- State Medical Board regulations for providers
- FDA compliance for diagnostic kits
- Terms & conditions, consent tracking

Support & Maintenance

- Tiered support (user, technical, critical)
- Maintenance windows with notifications
- Preventive maintenance, security patches
- Training & documentation for patients and providers

Conclusion

The HRT Portal is designed with a robust, role-based architecture that ensures each user type—Patients, Providers, Admins, and Super Admins—has access to the appropriate features and data necessary to perform their responsibilities effectively and securely. By clearly defining roles and capabilities, the system promotes operational efficiency, safeguards sensitive health information, and supports compliance with regulatory standards such as HIPAA and GDPR.

This structured access control, combined with comprehensive functionality across patient management, clinical operations, financial oversight, and platform administration, ensures that all stakeholders can seamlessly interact with the system according to their responsibilities. The implementation of these user roles not only enhances usability and accountability but also enables data-driven decision-making, secure communication, and optimized healthcare delivery across the platform.
